

Your first LST setup.

From a broker demo account to your first MT4 chart. Prepare the terminal first, then begin your seven-day LST demo when available.

What you need

A Windows computer or suitable Windows VPS, desktop MT4, a broker MT4 demo account with supported XAUUSD, and verified GNINE access. MT5, mobile and web terminals cannot run this EX4.

01 / Create a broker demo account

Your GNINE account and broker account are separate. Use the broker's demo account process and choose **MetaTrader 4** if asked. Save its **MT4 login number, password and exact server name**. Confirm the account uses virtual funds.

[Visit IC using the GNINE referral link](https://ic.com/?camp=75229)

<https://ic.com/?camp=75229>

Optional affiliate link: GNINE may receive a commission if you use it. You can use another compatible broker. Account availability depends on your location and the broker. This link is separate from GNINE partner codes.

02 / Install and sign in to MT4

[Download official MT4 for Windows](#) | [Official download page](#)

The official page also lists MT5; choose **MetaTrader 4 for Desktop**. Your broker may also supply its own official MT4 installer. Install MT4, then choose **File > Login to Trade Account** and use the broker demo credentials and exact server.

Confirm the terminal is connected and XAUUSD is available in Market Watch. If a server is missing, follow your broker's instructions. Ask GNINE support about symbol suffixes before running LST.

Give LST a home in MT4.

03 / Get your starter kit

Open [your GNINE account](#) and verify your email. When enrollment is available and your terminal is ready, choose **Start seven-day demo**.

Your LST demo lasts **seven calendar days, including weekends**, from that click. Creating or verifying your account does not start the clock. The demo does not become a paid subscription automatically.

With active access, select **Download LST starter kit (ZIP)**. Right-click the downloaded ZIP and choose **Extract All**. Open **START-HERE.html** for the offline guide, or this PDF. Find your private licence key on your GNINE account page.

If the account says the release is being prepared, the LST trial and download are still unavailable. You can prepare MT4 and a broker demo account while you wait.

04 / Copy the EX4 into Experts

1. Open the exact MT4 terminal you intend to use.
2. Choose **File > Open Data Folder**.
3. Open **QL4 > Experts**.
4. Copy **GNINE_LST_H4.ex4** from the extracted kit into Experts.
5. In MT4, open **Navigator > Expert Advisors**, right-click and choose **Refresh**. Restart MT4 if LST is still missing.

One installation per licensed MT4 account.

Avoid duplicate LST copies on other charts or terminals, and do not run another LST variant on that account.

Inside the kit

Unchanged customer EX4 · [START-HERE.html](#) · [QUICK-START.pdf](#) · [README.txt](#) · [TROUBLESHOOTING.txt](#) · [ACCESS-AND-SUPPORT.txt](#) · [OFFICIAL-LINKS.txt](#) · [SHA256SUMS.txt](#)

The kit contains no personal licence key, broker password, MT4 installer or trading presets. Download MT4 from its official source.

Set up your first chart.

05 / XAUUSD, H4 and your licence

1. Open a supported **XAUUSD** chart and select **H4**. Check any broker suffix with support.
2. Go to **Tools > Options > Expert Advisors**. Select **Allow WebRequest for listed URL** and add this exact base URL:

<https://license.landarch3d.com>

3. Attach LST from Navigator. In **Inputs**, paste your private key into **InpLicenseKey**.
4. Review every input and the lot setting before allowing trading.
5. When ready on demo, enable the EA trading permission and MT4's **AutoTrading**. The EA permission may be called **Allow live trading** even on a demo account.

Lot size is per ticket. The existing default is **0.02 lots** per ticket. Three tickets total **0.06 lots**. This is not a position size recommendation. Review the exposure and broker contract before enabling trading.

06 / Observe the terminal

Confirm the intended demo account, broker server, supported symbol and H4 timeframe. Read **Terminal > Experts** and **Journal** for licence, connection or permission messages. An immediate trade is not guaranteed; the strategy conditions still need to occur.

Keep MT4 running and connected. Closing the terminal, sleep mode or connection loss interrupts the software. The website does not monitor MT4 and membership does not include VPS hosting.

Do not enable DLL imports simply to clear an error. Send the exact message to support. Licence expiry does not automatically close positions; position management still depends on the running EA and its permissions.

A clear next step when you get stuck.

LST is missing from Navigator

Extract the ZIP. Use File > Open Data Folder in the exact MT4 terminal you intend to use. Put the EX4 in MQL4 > Experts, then refresh Navigator or restart MT4. Check that you installed MT4, not MT5.

MT4 says invalid account or no connection

Check the broker demo login, trading password and exact server. GNINE credentials cannot sign you into a broker. Ask the broker about server availability.

Licence or WebRequest error

Check that GNINE access is active, InpLicenseKey contains your private key without extra spaces, and <https://license.landarch3d.com> is in the allowed WebRequest list. Send the exact Experts message to support if it persists.

Connected, but no trade appears

Check XAUUSD/H4, your supported symbol, AutoTrading and the EA trading permission. Inspect Experts and Journal. Valid strategy conditions may not have occurred; do not force an entry or increase lot size to test it.

Contact GNINE

gninelabs@gmail.com

Include your GNINE email, MT4 build, broker/server, symbol, exact message and time. Redact passwords, licence keys and account balances from screenshots.

Trading can lose money. Demo results do not establish profitability or predict live results. For more help, use TROUBLESHOOTING.txt in the kit or [the online setup guide](#).
